

Electroweak baryogenesis, gravitational Waves and collider physics

Monday, 6 November 2023 11:30 (30 minutes)

We discuss physics of a model for electroweak baryogenesis, which satisfies theoretical and current experimental bounds. We then discuss how the model can be tested at future experiments at space-based gravitational wave interferometers, future colliders and also observation of primordial black holes.

Presenter: KANEMURA, Shinya (Osaka University)

Session Classification: Phase Transition
